EW VOLTAGE	V+	Case ground	Common	Output
RW CURRENT	V+	V-	Case ground	V-

LOAD LIMITATIONS 4-20 MA OUTPUT ONLY

- Maximum allowed loop resistance for a 32 VDC supply network
- Example (loop resistance of 682 Ω required a minimum supply voltage of 24 VDC)

$$V_{MIN} = 9 V + [0.022 A * x (R_L)]$$

(*includes a 10% safety factor)

$$R_L = R_s + R_w$$

R_L = Loop Resistance (Ω)
 R_s = Sense Resistance (Ω)

Note: See power supply requirement chart for maximum supply voltage limits

TruAccuracy

What Does It Mean?

Ashcroft's TruAccuracy™ specification is exclusively based on terminal point methodology instead of statistically derived schemes like 'best fit straight line'.

TruAccuracy™ means the Ashcroft E2S has ±0.25% of span accuracy out of the box. Zero and span setting errors are already included in the ±0.25% of span accuracy spec.

The E2S is ready to be installed with no additional calibration adjustments required.

A unit from another manufacturer advertised as ±0.25% best fit straight line may actually be a ±1.25% to ±2.25% device. Using best fit straight line method, the accuracy spec does not include zero and span setting errors, which can be as much as ±1.00% each.
